Book description

An introduction to basic programming, which includes coverage of modular programming, looping, iteration, data types, and other topics. Intended for students of computer science and mathematics, the book aims to offer them experience in writing increasingly more complex programmes in C. The text contains several sample C programmes and begins with a useful introduction to computers and their uses. It also includes an overview of the hardware, as well as, briefly, the software. Features include: definitions highlighted in colour, making them easier to find; and six appendices covering key words, syntax definitions, bit strong processing, and more, which serve as a useful students reference. An emphasis on programming style aims to ensure that students learn the correct skills. The text is intended for computer science students and mathematics students.
